

CYLINDRICAL

Glass bead reflectors for applications that are subjected to impacts or abuse.

REFLECTORS

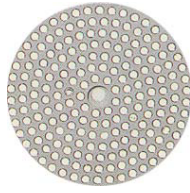

Long lasting Glass Bead reflectors are built into an extremely durable semi-flexible support making them virtually indestructible. Cylindrical reflectors are available in two (2) types, with and without holes.

Reflectors without holes require adhesive or double sided tape for installation.

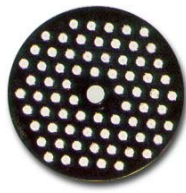

How they reflect:

Unlike prismatic reflectors with molded prisms, glass bead technology reflects light similarly to that of a mirror. The form and shape of the bead allow entering light to project itself in a wide angle, thereby creating a "Cats Eye" effect. Available in all colors.
